

Name:

EXAMPLE: CD Rack

Qty.	Part Name	Finished Size	Rough Cut Size (always add one inch)
2	long side A	20"	21"
3	short side B	5 1/2"	6 1/2"

Measure Twice - Cut Once!

Construction Steps:

1. Assemble all of your pieces on the table before applying any glue and make sure everything fits correctly.
2. Use a nail jig to draw nailing lines along the edges of each piece of wood you will be nailing through
3. Start all nails along the nailing lines. Be careful not to go too deep and make sure the nails are straight.
4. Apply glue to the edges of the pieces you will be nailing into. Wipe off any drips immediately!
5. Start by nailing from one end and continue across the piece. Straighten any cup in the wood as you go.
6. Use a countersink to set the nails slightly (1/8") below the surface of the wood.
7. Fill all nail holes, cracks or chips with wood putty.
8. Sand all surfaces and remove all pencil marks.
9. Stain your project to seal and protect it. (optional)
